Abstract:

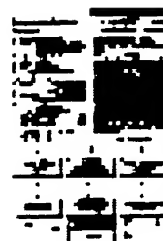

PURPOSE: To obtain a health food capable of simultaneously taking calcium content, mineral content, amino acid and vinegar and being palatable.

CONSTITUTION: This health food is constituted by dispersing powdery vinegar, coral sand, a vitamin E-containing ingredient and soybean lecithin into sunflower oil together with a dispersing agent and packing the dispersion in a capsule. The coral sand is a calcium source originated from skeletons of organisms and the coral sand contains various kinds of mineral contents and amino acids in good balance.
